Why do only 81 cryo tubes fit into your cryoboxes?

The answer is quite simple: it's because you're not yet using our super-slim EPPi® cryo tubes, which at last enable you to store 100 tubes in our standard boxes. You probably won't find anyone able to explain why the unpopular 9x9 boxes were invented and have more or less established themselves as the standard throughout the world. Now, in any case, this expensive waste of space is over.

Your specimen material is valuable, rare or even unique. You are aware of the contamination risk when working with cryo tubes. If you have previously opted for contamination-prone tubes with an inner thread and silicon O-ring, there is no further need to keep making this "compromise", which has hopefully been free of consequences. Now 100 EPPi® cryo tubes with external thread fit into the standard box of 133x133 mm. Check out the benefits for yourself.

EPPi® Cryo Tubes

- ▶ GMP-oriented production under cleanroom conditions.
- ▶ Extensive and very detailed quality control measures during the production process.
- ▶ Batch inspection system with leak test to validate the process.
- ▶ Exclusive use of FDA-approved polypropylene for in vitro diagnostics. Both tube and screw top are made of the same medical grade material to achieve a 100% seal.
- ▶ The outer thread with QuickLock screw closure and the screw top with safe-sealing lip enable the tubes to be closed very quickly and opened with only half a rotation.
- ▶ Packaged in resealable upright pouches with batch label.
- ▶ EPPi® cryo tubes can be printed individually to meet customer requirements. Personalized barcodes and QR codes are also possible.

- Manufactured in accordance with ISO 13485, ISO 9001, ISO 14001
- Produced to GMP guidelines in a cleanroom
- Produced from FDA-approved polypropylene with an usable range from -196 °C to +121 °C
- Not cytotoxic according to ISO 10993-5
- Free of heavy metals and plasticizers
- RNase-/DNase-free, DNA-free
- ATP-free
- BSE-/TSE-free
- Pyrogen-free
- Sterilized to ISO 11137-2:2013
- VDMax25 Validation
- Sterility Assurance Level of 10⁻⁶
- Centrifugable up to 17,000 g

When used with item number given in the overview (beginning with "RA1..."), grid dividers are always supplied separately (standard supply).

Instead of the customary method of supplying the box and grid divider separately, the box can be supplied with the grid divider already inserted. For this purpose the code in the item number for the grid divider (highlighted in yellow) must be added to the item number of the box.

Example: ALPHA Box of height 50 mm, white, standard as well as inserted grid divider of height 30 mm with 10x10 cells.

When used with item number given in the overview (beginning with "RA2..."), grid dividers are always supplied separately (standard supply).

Instead of the customary method of supplying the box and grid divider separately, the box can be supplied with the grid divider already inserted. For this purpose the code in the item number for the grid divider (highlighted in yellow) must be added to the item number of the box.

Example: ALPHA Box long2 of height 50 mm, white, standard as well as inserted grid divider of height 30 mm with 10x20 cells.

Why do only 81 cryo tubes fit into your cryoboxes?

The answer is quite simple: it's because you're not yet using our super-alm EPPi cryo tubes, which not only enable you to store 100 tubes in our standard boxes. You probably won't find anyone more or else established themselves as the standard throughout the world. Now, in any case, this expensive waste of space is over!

Your specimen material is valuable, rare or even unique. You are already using optical for contamination-free tubes with an inner thread and silicon O-ring, there is no further need to keep making this 100 EPPi cryo tubes with internal thread fit into the standard box of 133x133 mm. Check out the benefits for yourself!

- GMP-oriented production under cleanroom conditions.
- Extensive and very detailed quality control measures during the production process.
- Batch inspection system with leak test to validate the process.
- Exclusive use of FDA-approved polypropylene for in vitro diagnostics. Both tubes and screw top are made of the same medical-grade material to achieve a 100% leak.
- The outer thread with QuickLock screw closure and fine screw top with self-cleaning lip enable the tubes to be closed very quickly and opened with only half a rotation.
- Packaged in resealable upright pouches with batch label.
- EPPi cryo tubes can be printed individually to meet customer requirements. Personalized barcodes and QR codes are also possible.

When used with item number given in the overview (beginning with "RB1..."), grid dividers are always supplied separately (standard supply).

Instead of the customary method of supplying the box and grid divider separately, the box can be supplied with the grid divider already inserted. For this purpose the code in the item number for the grid divider (highlighted in yellow) must be added to the item number of the box.

Example: BRAVO Box with 50 mm height, white, standard as well as inserted grid divider of height 30 mm with 9x9 cells.

When used with item number given in the overview (beginning with "RB2..."), grid dividers are always supplied separately (standard supply).

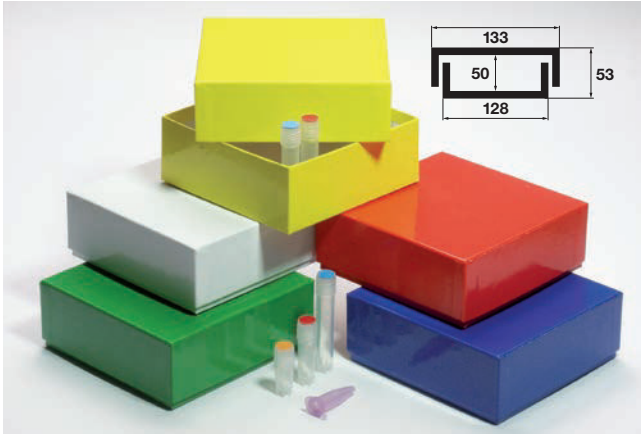

Instead of the customary method of supplying the box and grid divider separately, the box can be supplied with the grid divider already inserted. For this purpose the code in the item number for the grid divider (highlighted in yellow) must be added to the item number of the box.

Example: BRAVO Box long2 with 50 mm height, white, standard as well as inserted grid divider of height 30 mm with 9x18 cells.

Cryo Freezer 1°C

Made of transparent polycarbonate. Lid and tube holders made of HDPE, with foam liner.

Enables critical, repeatable cooling rate of approx. 1°C/minute for successful cryopreservation and optimum cell yield.

Easy to use with 100 % isopropanol and a freezing device.

For up to 18 cryo tubes from 1.0 to 2.0 ml. No direct contact between the tubes and the alcohol. Instructions for use printed on device. Stackable.

Safety clamping springs

The safety clamping springs ensure that the cryoboxes are firmly secured in vertical and horizontal racks. They are simply placed on the lid of the cryobox and pushed into the slot together with the cryobox. This prevents the cryoboxes from slipping out if the rack is tilted. There is no further need to worry about the risk of samples sliding out when work is being carried out on upright freezers and chest freezers or during transport. When the cryobox is withdrawn, the safety clamping spring is removed together with the cryobox. The safety clamping springs are suitable for all racks and boxes if the gap between the cryobox and the base above it is between 1 and 6 mm. Suitable for all makes.

Nothing is impossible!

Well-organized freezers and refrigerators are an essential prerequisite for systematic, efficient and ultimately successful work – not only in scientific laboratories.

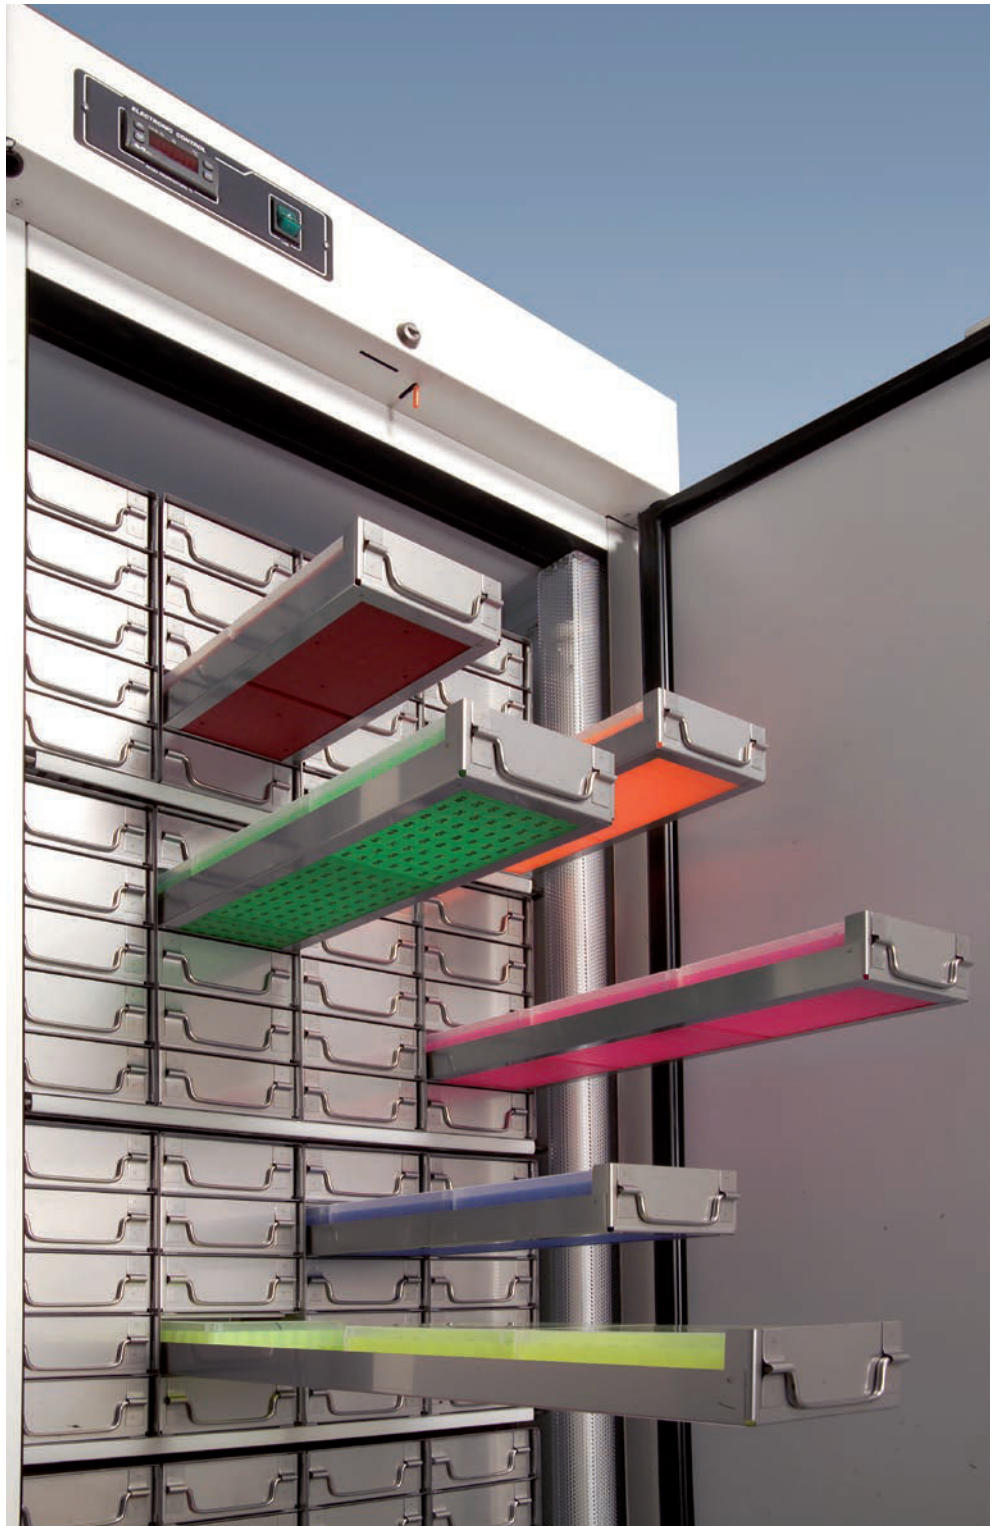

We provide the means to fulfil this prerequisite and devote ourselves to the task from a sense of conviction and with passion.

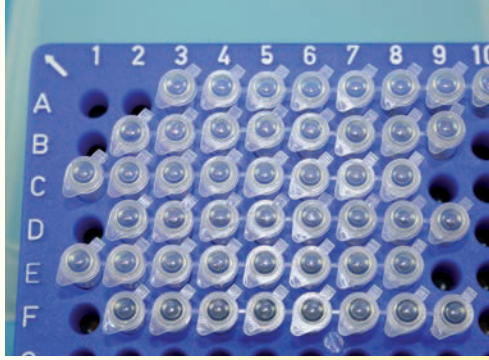

In fact, it is a passion for practical details and our liking for intelligent solutions.

This catalogue contains many suggestions for the interior fittings of all brands of refrigerator and freezer cabinets as well as freezer chests.

If you are looking for a solution to a problem or need assistance in setting up your refrigeration equipment, please contact us.

We will always be able to offer you a solution and will be glad to help you.
